

CUSTOMER COMMENTS

April 4, 2008

Dear David,

Thank you for sending the Flushchoice units to our office. Everything arrived intact. The instructions were easy to read and the installation process was simple.

We are happy to report that the devices are working fine and we are even happier knowing that we are doing our part in preserving precious water.

Your device couldn't have been manufactured at a better time. Our customers are demanding better products that help and not hinder our environment. Now we have a product to offer our customers who are concerned about water management and resource as much as we are.

Thank you Flushchoice for making the right choice in environmental conservation.

Dear Sir;

I want to let you know what we think of your sorely needed product. In a word - Terrific and we're really happy.

Your product is hard at work on all of our four toilets, performing perfectly for two months. By the way, your installer was prompt, courteous and efficient - refreshing these days. My family takes pride in doing our part conserving Florida's water and we see very noticeable savings on our water bill (around 20%).

We're recommending your product to all our friends and to my employer for the office. Keep up the good work!

Sincerely,

-Juanita R.

Dear Flushchoice management,

Thank you so much for installing the Flushchoice units in my home. My water bill has decreased dramatically just as you said it would. Your installer was very professional and knowledgeable about your product. I have enclosed a copy of my water bill for your review so you can see the huge savings! I would recommend your product to anyone.

Thanks again,

-Delores D

As a mother of three our toilets get flushed many times in a day, I was amazed to see how much water we saved by using your product. My children are excited every time they flush to see how they are helping to save our precious water.

Att: President

We recently upgraded our 2 toilets with your FlushChoice 3 months ago.

We opted for a professional plumber to do our installation for us because, as your instructions kindly pointed out, supply valves in older homes may become seized. Thanks for the warning because one valve was seized. Our plumber enlightened us that we had been wasting an enormous amount of money on our water bill because our toilet tanks were the old style and used a very large volume of water - 5 gallons each time we flushed. He also said our flappers were coated with mineral deposits and caused continuous water leakage.

Everything represented was accurate, in spite of our original skepticism. Our water bill has been dramatically reduced and we are now proudly doing our part to conserve the environment.

We calculate that your product will have paid for itself in a very short time - a good thing! Guests always ask "what's with the colored arrows on the toilet" They're always amazed when we explain the use of your product and the money we are saving.

You are providing a good service conserving our water resources. Thanks for your product.

Sincerely,

-Wendy C.
