Dear Al Gauert,

The equipment that Circuit Rider installed at the Rio Secca Golf Course works incredible. One of the 480 SP3 components received an electrical surge and protected all of the components in the control panel. This panel controls (4) 100 HP pump motors and has a replacement value of about \$100,000. Your equipment protected the four motors and all of the electronic equipment in the starter control panel. If it was July and your equipment wasn't there, the landscaping for the golf course would probably die. The 480 SP3 saved the control panel, the four 100 HP motors, and eliminated all down time.

Sincerely,

William Peot
